

IT Acceleration is a leading provider of technology management and one of the oldest independent firms supporting clients and the legal community in matters of electronic discovery and risk management. IT Acceleration's partners have been delivering IT services to corporations, institutions and consulting firms since 1983. With core competencies well established in technology management, the firm recognized and began to also address in 2002 the growing need for forensic computing services. Today, in addition to technology management, IT Acceleration provides expert electronic investigative services, supporting clients from "Preservation through Testimony."

At the Forefront of eRisk Management

Changes in the Federal Rules of Civil Procedure, effective December 1, 2006, made Electronic Discovery a potential liability with harsh legal consequences for all organizations. The need for electronic risk management, data preservation procedures and e-discovery review now significantly impacts all computerized workplaces. The same rules that once affected only law firms during litigation now apply to the daily operations of every enterprise. Fines, sanctions and audits await organizations with poorly managed IT environments, inconsistent compliance monitoring, and poorly drafted computer usage policies. IT Acceleration's eRISK Defender™ Service provides a pragmatic solution to ensure the necessary oversight for an effective electronic risk management program. eRISK Defender can also be used to validate the integrity of electronic risk policies and help enterprises "know what they don't know" by quickly identifying potential data and computer system abuse.

Accountable Technology Management

IT Acceleration differentiates itself from other technology providers by delivering a complete package of services, solutions and client communications. Each member of our team brings experience in the consulting and corporate business sectors. Our approach emphasizes a mutual understanding of how technology impacts a client's business and accountability for the solutions IT Acceleration recommends and delivers. Since we do not resell technology products, our unbiased advice and objectivity help clients obtain their best solution at the best price. Our long-time relationships with multiple vendors however enable us to better negotiate price and pass significant discounts to clients.

Accountable Project Management

Again, client communications and accountability are major IT Acceleration differentiators—from conducting preliminary due diligence to validate a project's need, scope and expectations, to managing schedules, costs, and quality of services involving multiple vendors. By keeping project teams, vendors and stakeholders fully informed of project status—including problems and newly discovered risks—IT Acceleration ensures successful project outcomes, as well as helps clients to avoid the excessive time and costs of continuing with projects that will not deliver results.
